

Build It Up

Directions: You are a geologist. Each of the rock layers below contains unknown creatures' DNA samples. By comparing known DNA samples to those of your unknown creatures, on the gels shown in a handout entitled "**DNA Match-up**", you are to chronologically arrange the four rock layers. In order to do this, carefully cut out each rock layer and arrange them in correct chronological order, from youngest to oldest, on the handout entitled "The Order Mat".

Name: _____ Clas: _____ Date: _____
